

We serve Industrial Manufacturers by providing components and turnkey solutions related to assembly, quality, process, safety, material handling and ergonomics.

Multi-Spindle Attachments are designed to simultaneously start, or remove multiple fasteners. Driven by a single motor, all fasteners turn at the same RPM and stop once the first fastener is snug. This attachment reduces assembly cycle time through elimination of multiple rundown steps.

**Common Applications:**

- Wheel Lugs
- Pulleys
- Flywheels
- Connecting Rods
- Designed to Suit Custom Bolts Patterns
- Bolt Circles / Patterns up to 32 inches (914mm) apart
